

ABSTRACT OF THE DISCLOSURE

- An inflatable prosthetic breast for wearing against an outer surface
- 5 of a chest includes a housing having a back wall having a peripheral edge. A front wall is attached to and extends along a length of the peripheral edge such that an inner space is defined between the front and back walls. The front wall has a convex shape such that the front wall extends outwardly away from the back wall. The housing has an opening therein.
- 10 The back wall and the front wall comprise a latex material has a thickness generally between .08 mm and 2.0 mm. A plug is removably extendable into opening. A fluid may be selectively added into or removed from the housing until the housing has a desired size.
